

databases in networked information pdf

The network model is a database model conceived as a flexible way of representing objects and their relationships. Its distinguishing feature is that the schema, viewed as a graph in which object types are nodes and relationship types are arcs, is not restricted to being a hierarchy or lattice

SciFinder is the most comprehensive information discovery tool for chemical and related information. It allows you to explore the CAS databases which contain literature from many scientific disciplines.

All Databases A-Z - Databases & Electronic Resources

In computing, a graph database (GDB) is a database that uses graph structures for semantic queries with nodes, edges and properties to represent and store data. A key concept of the system is the graph (or edge or relationship), which directly relates data items in the store a collection of nodes of data and edges representing the relationships between the nodes.
